- Consistency Principle: Using the same accounting methods over periods for comparability.
- Going Concern: Assumption that the business will continue operations indefinitely.
- Matching Principle: Expenses are matched with the revenues they help generate.
- Conservatism: Recognizing expenses and liabilities as soon as possible, but not overstating assets and income.

Recording Transactions: Journal and Ledger

The initial step in accounting involves recording business transactions through journal entries. Each transaction affects at least two accounts following the double-entry system, ensuring that the accounting equation ($\text{Assets} = \text{Liabilities} + \text{Equity}$) remains balanced.

Example of a journal entry:

- Purchase of goods for cash:

Debit: Purchases Account

Credit: Cash/Bank Account

Once recorded in the journal, these entries are posted to respective ledger accounts, which provide a summary of all transactions related to a particular account.

Preparing the Trial Balance

After posting all transactions, a trial balance is prepared to verify the accuracy of ledger postings. It lists all debit and credit balances, ensuring total debits equal total credits. Discrepancies indicate errors that need correction.

Financial Statements: Income Statement and Balance Sheet

The culmination of the accounting process involves preparing financial statements:

- Income Statement: Shows the revenues, expenses, and net profit or loss for a specific period.
- Balance Sheet: Presents the financial position of the business at a specific date, detailing assets, liabilities, and owner's equity.
