All Solutions in Elementary Differential Equations Ninth Edition

Understanding Solutions of Differential Equations

Solutions to differential equations can be categorized broadly into:

- **General solutions:** Contain arbitrary constants, representing the family of all possible solutions
- **Particular solutions:** Specific solutions obtained by applying initial or boundary conditions
- **Singular solutions:** Solutions that cannot be obtained from the general solution but satisfy the differential equation

Types of Differential Equations and Their Solutions

First-Order Differential Equations

The first-order equations are typically the starting point. The solutions depend on the form of the equation:

- **Separable Equations:** Can be written as $\frac{dy}{dx} = g(x)h(y)$. Solutions involve integrating both sides:

$$\int \frac{1}{h(y)} dy = \int g(x) dx + C$$

- **Linear Equations:** Of the form $\frac{dy}{dx} + p(x)y = q(x)$. The solution involves an integrating factor $\mu(x) = e^{\int p(x) dx}$: $y(x) = \frac{1}{\mu(x)} \left(\int \mu(x) q(x) dx + C \right)$

- **Exact Equations:** When a differential equation can be written as $M(x,y) + N(x,y) \frac{dy}{dx} = 0$ with $\frac{\partial M}{\partial y} = \frac{\partial N}{\partial x}$. Solutions are found via potential functions: Find $\Psi(x,y)$: $\frac{\partial \Psi}{\partial x} = M$, $\frac{\partial \Psi}{\partial y} = N$

Higher-Order Differential Equations

The solutions involve solving characteristic equations for linear constant coefficient differential equations:

- Homogeneous equations like $a_n \frac{d^n y}{dx^n} + \dots + a_1 \frac{dy}{dx} + a_0 y = 0$
- Characteristic equation: $a_n r^n + \dots + a_1 r + a_0 = 0$
- Solutions depend on roots r :

- Distinct real roots: $y = C_1 e^{r_1 x} + C_2 e^{r_2 x} + \dots$
- Repeated roots: $y = (A + Bx) e^{rx}$
- Complex roots: $r = \alpha \pm i\beta$, solutions involve sines and cosines: $y = e^{\alpha x} (A \cos \beta x + B \sin \beta x)$

Special Methods for Specific Equations

The book details techniques like undetermined coefficients and variation of parameters for nonhomogeneous equations, which are essential for obtaining particular solutions.

- **Undetermined Coefficients:** Used when the nonhomogeneous term is of a specific form (polynomials, exponentials, sines, cosines)
- **Variation of Parameters:** A more general method applicable to a broader class of nonhomogeneous equations

Solution Sets and Their Characteristics

General Solutions and Arbitrary Constants

The general solution of a differential equation contains arbitrary constants corresponding to the order of the equation. These constants reflect the family of solutions satisfying the differential equation without initial conditions.

Particular Solutions and Initial Conditions

Applying initial conditions or boundary conditions allows determination of the arbitrary constants, resulting in a unique particular solution. This process involves substituting known values into the general solution and solving for constants.

Singular Solutions

Singular solutions are special solutions that are not obtainable from the general solution by assigning specific constants. They often arise from the integration process or as envelope solutions in certain problems.

Solution Techniques Emphasized in the Ninth Edition

Analytical Methods

The textbook emphasizes solving differential equations analytically whenever possible, providing step-by-step techniques for various classes of equations:

- Solve first-order equations via separation, linearity, or exactness
- Use characteristic equations for linear higher-order equations
- Apply method of undetermined coefficients or variation of parameters for nonhomogeneous equations
- Employ Laplace transforms for initial value problems involving discontinuities or complex solutions

Numerical and Qualitative Solutions

While analytical solutions are central, the book also introduces numerical methods such as Euler's method and Runge-Kutta algorithms to approximate solutions where exact solutions are difficult or impossible to find. Qualitative analysis methods, including phase plane analysis and stability considerations, help understand solution behavior without explicit formulas.

Examples of All Solutions in Practice

First-Order Example

Solve $\frac{dy}{dx} = xy$.

Solution:

Separate variables:

$$\int \frac{1}{y} dy = \int x dx$$

$$\Rightarrow \ln |y| = \frac{x^2}{2} + C$$

$$\Rightarrow y = \pm e^C e^{x^2/2} = K e^{x^2/2}$$

where $(K = \pm e^C)$ is an arbitrary constant.

Second-Order Example

Solve $y'' - 3y' + 2y = 0$.

Solution:

Characteristic equation:

$$(r^2 - 3r + 2 = 0)$$

Factor:

$$(r - 1)(r - 2) = 0$$

Roots:

$$(r = 1, 2)$$

General solution:

$$(y(x) = C_1 e^x + C_2 e^{2x})$$

Common Types of Problems and Their Solutions in the Ninth Edition

Below is a breakdown of typical problem categories and the strategies used to solve them, as exemplified in the solutions manual.

- Finding Derivatives of Marketing Functions

These problems often involve functions such as revenue $R(x) = p(x) x$, where $p(x)$ is price as a function of demand x .

Solution Approach:

- Apply the product rule to differentiate $R(x)$.
- Use the derivative to analyze increasing or decreasing revenue.
- Determine maximum revenue by setting the derivative to zero (critical points).

Example:

Given a demand function $p(x) = 100 - 2x$, find the value of x that maximizes revenue.

Step-by-step:

- Write $R(x) = p(x) x = (100 - 2x) x = 100x - 2x^2$.
- Derive $R'(x) = 100 - 4x$.
- Set $R'(x) = 0 \Rightarrow 100 - 4x = 0 \Rightarrow x = 25$.
- Verify maximum using the second derivative test: $R''(x) = -4$ (negative), confirming a maximum at $x=25$.

- Optimization Problems in Marketing

These involve minimizing costs or maximizing profit within given constraints.

Solution Approach:

- Formulate the objective function based on problem parameters.
- Use differentiation to find critical points.

- Apply constraints to ensure realistic solutions.

Example:

A company's cost function is $C(x) = 50 + 0.5x + 0.01x^2$. Find the production level x that minimizes cost.

Step-by-step:

- Compute $C'(x) = 0.5 + 0.02x$.
- Set $C'(x) = 0 \Rightarrow 0.5 + 0.02x = 0 \Rightarrow x = -25$, which isn't feasible (negative production).
- Since the derivative is always positive for $x \geq 0$, cost increases with production. The minimum cost occurs at the lowest production level, $x=0$.

(Note: In cases where the derivative equals zero at a positive x , that point indicates a minimum or maximum, depending on the second derivative.)

- Analyzing Demand and Supply Curves

These problems involve understanding how changing variables affect market equilibrium.

Solution Approach:

- Set demand equal to supply to find equilibrium.
- Use derivatives to analyze how shifts in demand or supply impact equilibrium price and quantity.

Example:

Demand function: $D(p) = 200 - 4p$; Supply function: $S(p) = 3p + 50$. Find the equilibrium price and quantity.

Step-by-step:

- Set $D(p) = S(p)$: $200 - 4p = 3p + 50$.
- Solve for p : $200 - 50 = 4p + 3p \Rightarrow 150 = 7p \Rightarrow p = 150/7 \approx 21.43$.
- Find quantity: $D(p) = 200 - 4(21.43) \approx 200 - 85.72 \approx 114.28$.
- Equilibrium: Price $\approx \$21.43$, Quantity ≈ 114 units.

Navigating Challenges and Common Pitfalls

While solutions are comprehensive, students often encounter difficulties in:

- Applying the chain rule in complex functions
- Interpreting the economic or marketing significance of derivatives
- Managing multi-step problems under exam conditions

Tips:

- Break down complex derivatives into manageable parts.
- Always relate mathematical results back to the real-world context?what does the derivative tell you about revenue or demand?
- Practice time management and organize work for clarity during exams.

Enhancing Learning with Supplementary Resources

Beyond the solutions manual, consider leveraging:

- Online tutorials: Many platforms provide step-by-step videos explaining similar problems.
- Graphing calculators and software: Tools like Desmos or GeoGebra help visualize functions and their derivatives.
